

ComplyCheck

AI-Powered SAMA Compliance Auditor

Turning weeks of manual evidence review into a same-day, cited compliance gap report.

1 · Market Segmentation

Who ComplyCheck is built for

SAMA-regulated banks and licensed fintechs in Saudi Arabia

Specifically: compliance / GRC teams of 3–15 people at mid-sized banks, payment companies, and licensed fintechs who must complete a SAMA Cyber Security Framework (CSF) self-assessment at least once a year — and every time a control set is updated.

Not "students" or "companies" — specifically:

- Local & foreign-branch banks licensed by SAMA
- Licensed payment service providers & fintechs
- Finance companies under SAMA CSF scope

Users

Compliance analysts / GRC officers who gather evidence and run each assessment

Buyer

Head of GRC / CISO — owns the audit-readiness budget and signs off on the subscription

2 · User Needs & Value Proposition

Why compliance teams need this

The SAMA CSF spans 36+ granular controls — governance, cryptography, network security, access management, incident response, cloud computing — each needing evidence pulled from dozens of scattered, often bilingual (Arabic/English) documents.

WITHOUT COMPLYCHECK

- Days of analyst time per audit cycle, manually reading every policy and screenshot
- Inconsistent PASS/FAIL judgment between reviewers
- Gaps often surface only when SAMA's own auditors find them

WITH COMPLYCHECK

- Same evidence set assessed end-to-end in minutes, control by control
- Every verdict comes with a confidence score and a cited source excerpt
- Analysts spend their time closing real gaps, not searching PDFs

3 · Core Solution — MVP

One evidence package in, one gap-analysis report out

Built on a real RAG engine — FastAPI backend, Streamlit UI, hybrid Chroma + BM25 retrieval, OpenAI judge/vision.

4 · Product Differentiation

What sets ComplyCheck apart from the alternative — a spreadsheet and days of reading

Grounded, cited verdicts

Every PASS/FAIL traces to a specific evidence excerpt — never a generic AI summary.

Hybrid search

Vector + BM25 (RRF-fused) catches exact SAMA control terminology that pure semantic search misses.

Native Arabic support

Repairs common Arabic-PDF extraction corruption and reasons over Arabic evidence directly — no translation layer.

Handles messy real evidence

Screenshots and scanned exports read via vision OCR, not just clean text PDFs.

5 · Business Model & Impact

Tiered SaaS subscription, billed per institution

Starter

SAR 2,000/mo

Single business unit · capped monthly runs

Team

SAR 4,000/mo

Multiple business units · more seats & runs

Enterprise

Custom

Continuous monitoring · unlimited runs · SSO

~40

target mid-market institutions (illustrative)

~SAR 120K

projected monthly revenue (avg. SAR 3K/institution)

Annual

recurring SAMA CSF cycle drives high retention

REAL MEASURED COST PER RUN — NOT ILLUSTRATIVE

\$0.0194

per full compliance run (36 controls, real OpenAI API usage)

\$0.00

embedding + evidence indexing — fully local (fastembed + in-memory Chroma)

Live Demo

sample evidence → full SAMA CSF gap analysis report, end to end.

FastAPI

Streamlit

Hybrid RAG (Chroma + BM25)
